

The Stateline Fiat dealership brings a building to the Carolinas that exemplifies perfection and state of the art design.

The exterior of the building is constructed with aluminum composite metal panels and a fiber cement board that creates a shadow-line reveal with its projection from the building face. The bright red tower elements that flank each corner of the building, provide a contrast with the dark-grey fiber cement panels.

The inside of the building is equipped with modern lighting fixtures that surround a “cloud” dropped gypsum board ceiling. Custom millwork made especially for Fiat, will be found along the perimeter walls. The high ceiling and exposed ductwork compliment the modern style that has been established in the Fiat design.
