

Calsonic North America, Inc.
Farmington Hills, Michigan

A 105,000 s.f. state-of-the-art design and testing facility of exhaust, engine cooling, and climate control systems/components for passenger cars and light vehicles. The complex building design included a climatic vehicle tunnel for simulating actual operating conditions for performance evaluations, a climate control system test chamber, and electromagnetic compatibility chamber (EMC), anechoic chambers, and a prototype lab.
