

**Cherry Hill Gardens
Condominium Project**
Canton, Michigan

A multiphase 158 unit condominium project. The typical two story building consists of 6 units and was constructed utilizing a wood structure with an attractive brick exterior. Interior finishes include granite, millwork, fireplaces, and other high end features. The schedule was set up to deliver and complete the punchlist for one building every month. In addition to the construction, Kirco Manix handled the buyer walk-thru and all warranty claims on site.
